

Summary of Speno's participation **in CO₂ Neutraal Initiative**

Speno is since October 2021 a member of the Stichting CO₂-Neutraal initiative through his representative in The Netherlands.

Here is an overview of the occasions in which Speno participated:

1. Event Stichting CO₂-Neutraal 9th December 2021 (by TEAMS due to COVID):
 - 10:00h-12:00h Workshop "Off the Grid";
 - 13:00h-15:00h Plenair event with several speakers.

After this session we got inspired by Brederoo which supplies containers with batteries to power big festivals and companies.

In 2021 we have started an initiative to electrify our maintenance activities of our grinding trains on our 5 depots in The Netherlands with the support of Prorail, which has ordered a design company to deliver the electrical power supply on the depots.

2. Event Stichting CO₂-Neutraal 22nd March 2022 (by TEAMS due to COVID):
 - 10:00h-12:00h Workshop "Een nieuw energiesysteem: van vraag- naar aanbod gestuurd" (a new energy system; driven from demand to supply);
 - 13:00h-15:00h Plenair event with several speakers.

Unfortunately, the workshop has been cancelled by the organization and I have participated again on the workshop "Off the grid".

In short: initiatives/subjects are quite interesting and has brought us ideas to electrify our maintenance process on our grinding trains.

The platform of CO₂-Neutraal is the right choice for us at SPENO!
